

Plants that Require Special Attention for Fall Planting

Our experience at Lake County Nursery, Inc. has shown that certain trees require special attention when dug in the fall. With proper care these plants can be successfully transplanted in the fall. However, it is the purchasers responsibility to ensure that the proper cultural practices are followed for successful fall transplanting. Lake County Nursery, Inc. assumes no responsibility for the survival of the following varieties when dug in the fall and will code such orders as 'Dug at Customers Risk':

Betula varieties	Koelreuteria paniculata	Populus varieties
Carpinus varieties	Liriodendron tulipifera	*Prunus - All stone fruits
Cercis canadensis	*Liquidambar styraciflua	*Pyrus varieties
*Cornus varieties	Magnolia varieties	*Quercus varieties
*Corylus spp.	*Nyssa sylvatica	Salix, weeping varieties
Crataegus varieties	Oxydendron arboreum	Taxodium distichum
*Ginko biloba	Platanus acerifolia	Zelkova varieties

*Requires special attention when transplanting both in the spring and fall.

Guidelines for Fall Planting:

1. Use a good quality topsoil.
 2. Topdress trees with an organic mulch, such as leaves or shredded bark, at a depth of 4-6" for winter root protection.
 3. Protect all new planting from salt spray, either by avoiding planting near areas where air borne salt is a problem, or by erecting a protective screen.
